Software Developer & Data Analyst with 3+ years of experience building scalable web & mobile applications using React.js, React Native, Node.js, & TypeScript. Proficient with cloud platforms like Azure & Firebase. Proven track record of driving data-informed decisions to boost business growth in the retail & electric vehicle (EV) sectors.

## EDUCATION

**California State University, Fullerton**

Master of Science, Major in Computer Science

**Fullerton, USA**

Aug 2024 – May 2026

**University of Mumbai – K.J Somaiya Institute of Technology**

Bachelor of Engineering, Major in Information Technology

**Mumbai, IN**

Aug 2017 – May 2021

## TECHNICAL SKILLS

JavaScript, TypeScript, Python, Java, SQL, React.js, React Native, ES6, WebKit, Redux, HTML5, CSS3, Flexbox, Responsive Design, React Hooks, Memoization, Node.js, Express.js, JWT, RESTful APIs, .NET, MySQL, PostgreSQL, MongoDB, Firebase Firestore, Redis, Azure SQL, Prisma ORM, Power BI, Pandas, Matplotlib, Seaborn, Jupyter Notebook, AWS (Lambda, EC2, S3), Azure (App Services, Blob Storage, Application Insights, Log Analytics), Docker, Kubernetes, Git, GitHub, Postman, Swagger, SSMS, Xcode, Android Studio, ESLint, Prettier, Figma

## EXPERIENCE

**Adobe @Fullerton**

*Data Analyst*

**California, USA**

May 2025 – Present

- Delivered insights to student organizations by building websites & analytical reports, enabling data-driven decisions.
- Increased student engagement by **10%** by analyzing event participation, email campaign, & membership growth across Adobe programs.
- Reduced event planning time by **~15%** by creating **interactive data visualizations** that streamlined scheduling & logistics.
- Supported strategic decision-making for executive leadership by **developing monthly visual dashboards & performance reports**, improving visibility into program impact.

**SANKEY SOLUTIONS**

*Solution Analyst*

**Mumbai, IN**

July 2021 – May 2024

- Led the development of a cross-platform **EV charging & retail mobile application** used across 900+ fuel, retail, & EV sites, improving customer engagement & increasing footfall by **15%**.
- Architected & implemented **real-time EV charging insights** (SOC, kWh, tariff, session costs) using **WebSocket** data streams & **REST APIs**, increasing customer transparency & session completion rates.
- Built a **dynamic tariff system** with admin-controlled pricing via a back-office portal; integrated **Azure SQL, REST Apis, React Native, ReactJS, .Net** to reflect time-based promotional tariffs instantly in the mobile app.
- Streamlined **invoice generation** by normalizing database tables & optimizing query structures, reducing generation time from **45s to 15s** & handling **10,000+ invoices/week** with **40%** faster performance.
- Enabled admins to **control app features via the web portal**, such as sending push/in-app notifications (via FCM), enabling/disabling services, or scheduling tariff updates—creating a seamless app-to-admin interaction loop.
- Implemented **scheduled cron jobs** to cache daily sales reports into Redis at midnight, reducing server load & ensuring report availability by 8 AM.
- Improved **mobile app performance** using lazy loading, virtualization, **React hooks**, & **memoization**, resulting in 4% faster load times & a smoother UI experience.
- Strengthened backend & infrastructure stability by integrating **Azure Application Insights, Log Analytics, & autoscaling alerts**, enabling proactive monitoring & 99.9% uptime during peak usage.

## PROJECTS

**Regional Sales Analysis Power BI Dashboard** - Python, Power BI, Pandas, Matplotlib/Seaborn, Jupyter Notebook

[GitHub](#)

- Performed comprehensive **Exploratory Data Analysis (EDA)** on monthly electronic sales data to uncover **revenue trends, peak sales periods, & customer purchase behavior** by identifying **top-selling products, high-performing regions, high-value order patterns**.
- Created **visualizations** such as **trend lines, heatmaps, & category-based product distribution** charts to communicate findings clearly & support **data-driven decision-making**.
- Built a **Power BI dashboard** summarizing key metrics & trends, enabling interactive exploration & real-time business insights for non-technical stakeholders.

**Hire Hour** - JavaScript, React Native (TypeScript), Node.js, Prisma ORM, PostgreSQL, SendGrid, Cloud computing, Firebase

[GitHub](#)

- Developed a cross-platform mobile app using React Native and TypeScript, enabling users to book **freelance event staff** with **real-time availability and geolocation-based search**.
- Built a scalable backend using **Node.js, Prisma ORM, and PostgreSQL**, and integrated **JWT authentication** and **SendGrid** for secure access and **automated email notifications**.
- Implemented **real-time push notifications** to increase job acceptance and streamline communication between users and providers.
