Summary

Software engineer and MSCS graduate (3.84 GPA) with hands-on industry experience building scalable React and Node.js applications. Proficient in distributed systems, event-driven architecture and AI-integrated product development, with experience deploying cloud native solutions on AWS.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL, Java

Frontend: React.js, Next.js, Redux, React Native, Fabric.js, Context API, HTML, CSS, Webpack, Vite, Babel

Backend: Node.js, Express.js, REST APIs, PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM, JWT, GraphQL

AI & APIs: Replicate API, OAuth2, Stripe, OpenAI, Gemini Nano, Esri ArcGIS, ImageKit

System Design: Microservices, Event-Driven Architecture, Apache Kafka, Distributed Systems, API Gateway, Rate Limiting, WebSockets, Message Queue, CDN, Low-Level Design (LLD), High-Level Design (HLD)

Cloud & DevOps: AWS Lambda, AWS RDS, Docker, Kubernetes, CI/CD, Git, GitHub

Tools & Testing: Jest, OOP, Data Structures & Algorithms, Agile, Debugging

Projects

RestaurantIQ - Geospatial Site Selection Platform - *React, Node, MongoDB, Esri ArcGIS, OpenAI* | [GitHub](#) | [Demo](#) | [Devpost](#)

- Built a geospatial site selection platform at Fully Hacks 2026 scoring 20 candidate locations across 6 weighted factors using ArcGIS Geocoding, Places, and GeoEnrichment APIs, and surfaces the top 5 locations on an interactive Esri map in an estimated 7–9 seconds end-to-end.
- Designed dual scoring modes (Gap Finder and Join Hotspot) to surface underserved food deserts or high-traffic clusters based on user strategy, with OpenAI GPT-4o-mini generating plain-English site insights.
- Engineered a commercial rent pressure heatmap by batching 60+ micro-grid points through ArcGIS GeoEnrichment, computing a weighted pressure index and rendering color-coded markers with interactive score breakdowns.
- Implemented per-user API rate limiting on the Node.js backend and a RESTful client-server architecture that centralized all ArcGIS and OpenAI calls server-side, protecting API keys and preventing quota exhaustion under concurrent load.

Vision Crafter AI Image Editor - *TypeScript, React.js, Node.js, PostgreSQL, AWS, Generative AI*

[GitHub](#)

- Built a full-stack Generative AI image editing SaaS with Fabric.js canvas supporting object manipulation, layering, typography controls, and multi-format export across 9 aspect ratios, served via ImageKit CDN for optimized delivery.
- Implemented a 50-state undo/redo history manager with Fabric.js JSON serialization (5–50 KB per state, keeping 50-entry history under 2.5 MB), and a debounced auto-save pipeline (5s) sequencing canvas export, ImageKit CDN upload, and PostgreSQL state persist.
- Integrated 2 Replicate models for AI-powered background removal and outpainting, and secured 9 protected API routes with 15-minute JWT access tokens, HttpOnly cookies, and automatic silent refresh via Axios interceptors on 401 responses.

Experience

Sankey Solutions – Software Engineer / Solution Analyst

Jul 2021 – May 2024

- Owned end-to-end delivery of a full-stack EV charging analytics platform serving 10,000+ DAU across 900+ distributed locations, maintaining 99.9% uptime and processing 10,000–20,000 API requests per day.
- Led development across three major product versions from architecture through release, contributing to frontend, backend, and infrastructure layers while maintaining technical documentation across all release cycles.
- Built a React and TypeScript dashboard with modular component design, lazy loading, and optimized Redux state management, improving software efficiency by 30% and accelerating the development cycle.
- Architected an event-driven microservice using Apache Kafka for real-time EV charging status updates, reducing response latency and enabling seamless API integrations across payment reconciliation workflows.
- Implemented Role-Based Access Control (RBAC) with permission-scoped authorization across user roles, eliminating unauthorized access incidents and strengthening platform security posture.
- Maintained comprehensive technical documentation across all 3 product versions, enabling faster onboarding and reducing cross-team knowledge gaps.

Education

California State University

California

Master of Science in Computer Science (GPA: 3.84/4.0)

Aug 2024 – May 2026

University of Mumbai

India

Bachelor of Engineering in Information Technology (GPA: 3.5/4.0)

Aug 2017 – May 2021
