Technical Summary

Cloud-focused Software Engineer with 3+ years of experience designing scalable backend systems and distributed microservices. Experienced with Python, Node.js, and cloud deployments across AWS and Azure. Strong background in REST APIs, event-driven architectures, and secure multi-tenant systems supporting production-scale workloads.

Education

California State University, Fullerton

Master of Science in Computer Science (GPA: 3.8/4.0)

Fullerton, CA

Aug 2024 – May 2026

University of Mumbai

Bachelor of Engineering in Information Technology (GPA: 3.5/4.0)

Mumbai, India

Aug 2017 – May 2021

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, Java

Backend & Databases: Django, FastAPI, Node.js, Express.js, REST APIs, Microservices, Event-Driven Systems, PostgreSQL, MySQL, MongoDB, Redis

Architecture & Security: System Design, RBAC, JWT Authentication, Distributed Systems, API Design, Rate limiting, API gateway, Message Queue, Apache Kafka

Frontend: React, Redux, React Native, Webpack, Vite, Babel, CSS

Cloud & DevOps: AWS, Azure, CI/CD, Git, GitHub, Cloud Deployments

Professional Experience

Sankey Solutions

Mumbai, India

Software Engineer

Jun 2021 – Jun 2024

- Designed and deployed scalable backend services using Python/Django REST APIs on Azure cloud infrastructure to support analytics workloads for Motor Fuel Group (MFG).
- Architected an event-driven microservice for real-time EV charging status updates, improving response latency by 10% and enhancing system scalability.
- Consolidated transaction data across 900+ distributed charging sessions into a unified processing workflow, improving analytics visibility and operational efficiency.
- Designed a role-based access control (RBAC) authorization system to secure multi-role enterprise applications and improve compliance across internal teams.

Study Monk

Bengaluru, India

Software Engineer

Jan 2021 – Jun 2021

- Built and deployed RESTful APIs using Node.js, Express, and MySQL on AWS cloud infrastructure, supporting 1,000+ active users with optimized query indexing and secure JWT authentication.
- Increased paid conversions by 15% by integrating Stripe payments (Apple Pay, Google Pay, and cards) while ensuring reliable transaction handling.
- Improved application responsiveness through performance optimizations including lazy loading, asset compression, and memoization, increasing Lighthouse score from 78 to 90.
- Reduced feature development time by 30% by designing reusable modules and shared UI components that improved maintainability.

Projects

Vision Crafter – Image Editing Platform - React, FastAPI, Python, PostgreSQL, AWS

GitHub

- Developed a full-stack cloud-enabled image editing platform using React and Fabric.js supporting image transformations, layering, and object manipulation.
- Designed backend FastAPI and PostgreSQL to support persistent project storage and multi-session editing workflows.
- Implemented client-server state synchronization enabling reliable project recovery and continuous editing across sessions.
- Optimized image rendering performance by minimizing re-renders and batching state updates to improve UI.

Certifications and Articles

Google Cloud Computing Foundations Certificate

Google

Data Structures and Algorithms Specialization - University of California San Diego
