Education

California State University, Fullerton

Master of Science in Computer Science (GPA: 3.8/4.0)

Fullerton, CA

Aug 2024 – May 2026

University of Mumbai

Bachelor of Engineering in Information Technology (GPA: 3.5/4.0)

Mumbai, India

Aug 2017 – May 2021

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL, Java

Frontend: React.js, Redux, React Native, Context API, Webpack, Vite, Babel, HTML, CSS

Backend: Node.js, Express.js, REST APIs, PostgreSQL, MySQL, Prisma ORM, JWT, Google OAuth

System Design: Microservices, Event-Driven Architecture, Apache Kafka, Distributed Systems, API Gateway, Rate Limiting

Cloud & DevOps: AWS, Azure, CI/CD, Git, GitHub, Docker, Kubernetes

Testing & Tools: Jest, Agile, OOP, Data Structures & Algorithms, Debugging

Experience

Sankey Solutions – Software Engineer / Solution Analyst

Jul 2021 – May 2024

- Delivered a full-stack EV charging analytics platform serving 10,000+ DAU across 900+ distributed locations, maintaining 99.9% uptime and processing 10,000–20,000 API requests per day.
- Built a React and TypeScript dashboard with modular component design, lazy loading, and optimized Redux state management, improving software efficiency by 30% and accelerating the development cycle.
- Architected an event-driven microservice for real-time EV charging status updates with Apache Kafka, reducing response latency and enabling API integrations across payment reconciliation workflows.
- Implemented Role-Based Access Control (RBAC) with permission-scoped authorization across roles, eliminating unauthorized access incidents.

Study Monk – Software Engineer

Jan 2021 – Jun 2021

- Deployed RESTful APIs using Node.js, Express.js, and MySQL on AWS supporting 1,000+ active users with optimized query indexing and JWT-based authentication.
- Integrated Stripe payment gateway, increasing paid conversions by 15% while ensuring reliable transaction handling.
- Improved Lighthouse performance score from 78 to 90 via code-splitting, lazy loading, asset compression, and memoization, reducing initial load time by 4%.
- Reduced feature development time by 30% by designing a reusable React component library and centralized UI kit that improved maintainability across the platform.

Projects

Vision Crafter AI Image Editor - Typescript, React.js, Node.js, PostgreSQL, AWS, Generative AI

GitHub

- Developed a full-stack Generative AI image editing platform supporting HTML Canvas-based object manipulation, layering, typography controls, crop presets, and multi-format file exports serving real-time collaborative sessions.
- Integrated multiple AI/ML models including 851-labs/background-remover for background removal, bria/expand-image for AI image extension, and google/nano-banana for generative image creation directly into the canvas workflow.
- Managed global state with React Context API across a 50-state undo/redo stack with debounced auto-save, ensuring zero data loss across sessions.
- Built a secure REST API with Node.js, Express.js, and PostgreSQL via Prisma ORM, implementing JWT authentication layered on Google OAuth with ImageKit for signed blob storage.

Prep Mate AI Interview Coach - React, TypeScript, Gemini Nano API, Web Speech API, Firebase

GitHub | YouTube | Demo

- Built an AI-powered interview simulator using Google Gemini Nano API for structured feedback generation and Web Speech API for real-time speech-to-text transcription with **sub-second response latency**.
- Designed a low-latency feedback pipeline with streaming transcription and incremental LLM evaluation, enabling a responsive coaching loop without full-response buffering.
- Optimized prompt design and response chunking to reduce model processing time by 5% while maintaining feedback relevance across technical and behavioral interview domains.

Certifications

Google Cloud Computing Foundations Certificate

Google

Data Structures and Algorithms Specialization – UC San Diego

Coursera
